Mobile: - 07906 054078

I am a hard-working individual as well as self-motivated, experienced in working as part of a larger team and on an individual. I learn fast and enjoy new challenges alongside a unique "can do" attitude to face problems as they arrive. I get much enjoyment from learning and developing new skills and adapt quickly to new circumstances. I have a great passion for Python programming and fascinated about programming languages of all kinds

Employment

Jun`19 - Dec`20

Web Developer

Choosemore - Bristol

Creating a base website for Choosemore, a start-up company in Bristol. I have been creating the website to their specification including; Coding, Moving and Adding test products so their potential investors can consider and help develop the business further.

Aug`18 – Oct`20

Game Developer

Virtuverse – Sweden/Bristol

At Virtuverse, I learned basic game development and code logic. I developed quickly becoming responsible for creating game features and for starting and assisting the improvement of the AI combat system against players using blueprints UE4's built-in building block language. During public trial periods I would act as customer and tech support, dealing with any reported bugs and repairing them or writing them all on the joint server.

I would also interact with customers who found themselves unable to login or having account or game issues and help them by resolving the matters. I learnt basic AWS and would talk through ways of improving their chances of getting into the game.

I also functioned as a Technical Support Officer. We periodically ran tests for large groups or select groups to find bugs in the game. During these periods I act as remote Tech Support working from home for everyone who has trouble logging/downloading the game or are finding bugs during gameplay.

I would deal with all account issues and manage the AWS database for each player when problems arose. Recently I have been the sole tech support member during these tests and have interacted and helped multiple people simultaneously digitally to ensure they can experience the game.

Work Experience

July`15

Classroom Assistant

Sefton Park School - Bristol

During my work experience placement for SMRT I worked as a classroom assistant for years 2's, 3's and years 5's. I helped calm students and also would help teachers in preparing activities for the class during the week as well as during break time keep an eye for any safety issues or fights in the playground.

Current

Market Stall Salesman I`m Fudge - Hereford

At weekends I help my Dad and Step-Mum with her fudge business on their market stall in Hereford High Town. I help on the stall by weighing and selling fudge and other produce to customers and up-sell as well as building relationships with customers so they come again.

- Python (1 year)
- Django (1 year)

Additional Information

I have years of experience in computing and extremely passionate about all its aspects; from programming to Cyber Security to Coding and Computer and Network repairs and maintenance. I have always found IT a fun and relaxing thing to do. My 1st project when I was 12 was to help make a very basic server in PHP. I worked as part of a team and have been hooked ever since and continue to broaden my skills. I have good Social Skills and people feel comfortable with me easily and this ensures I am comfortable working in a Team. I love to learn new skills, especially right now with cooking and have an eclectic skill base always self.
